

- [Application](#)
 - [Emptying Form Validation](#)

Application

- **Single Containment:**
- If the bin in the application has only one containment:
 - Display the containment ID as uneditable.
- **Multiple Containments:** If the bin in the application has multiple containments:
 - Display the containment IDs in a dropdown (single select only).
 - Show only the containment IDs that are not currently in the application process (i.e., `emptying_status: false`).
- **Containment ID Display:** Ensure that the containment ID is displayed in the application data table.

Emptying Form Validation

- Previously, we validated by summing up multiple containments associated with a bin.
- **Update:** Remove the sum validation.
